

Two ways for installing 4 position controllers in a circuit as below:

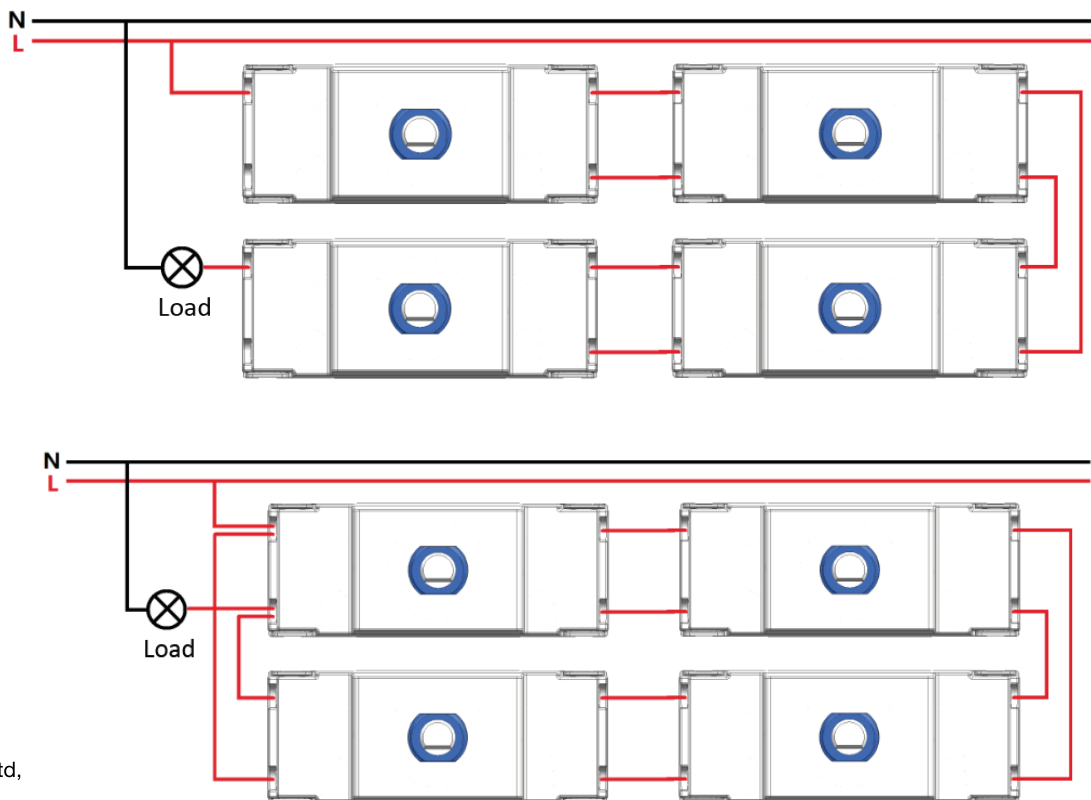

1. Combination dummy dimmer (SL-200DD) and intermediate switch (SL-300DD)

The intermediate switch (SL-300DD) functions as a midpoint controller. Multiple SL-300DD units can be connected in the middle positions of the circuit, as demonstrated in the wiring diagram below.

2. 4 x intermediate switches (SL-300DD)

This method supports connecting multiple SL-300DD switches for controlling the circuit from multiple positions, as illustrated in the wiring diagrams below.

SAFETY FIRST

- BEFORE STARTING ANY ELECTRICAL WORK ALWAYS SWITCH OFF AT THE MAINS
